InChi Pilot Gateway user journey

Authorised BNCS internal user journey from access to audit review

Week 1 starts
26 October 2026

1 Access workspace

USER ACTION

Sign in and enter a role-aware workspace.

PLATFORM RESPONSE

Authenticates the user, applies permissions and records session activity.

Abhishek, Priyanka / security review: Ajendra

2 Register supplier and product

USER ACTION

Create supplier and product records with supporting evidence.

PLATFORM RESPONSE

Validates fields, stores structured data and creates an audit event.

Priyanka, Abhishek, Vishal / workflow: Adrika

3 Assess China readiness

USER ACTION

Complete the readiness assessment and resolve missing information.

PLATFORM RESPONSE

Applies approved rules, shows gaps and routes the record for review.

Adrika, Priyanka, Abhishek, Vishal

4 Capture buyer requirement

USER ACTION

Record demand, eligibility conditions and commercial priorities.

PLATFORM RESPONSE

Validates and versions the requirement for matching.

Adrika, Priyanka, Abhishek, Vishal

5 Generate match

USER ACTION

Run matching against eligible supplier and product records.

PLATFORM RESPONSE

Applies mandatory filters, weighted scoring and bounded semantic comparison.

Alok, Vishal, Abhishek / security: Ajendra

6 Review and decide

USER ACTION

Compare candidates, inspect reasons and record accept, hold or reject.

PLATFORM RESPONSE

Shows explanations, warnings and missing data. Captures the human decision.

Adrika, Priyanka, Abhishek, Alok

7 Manage opportunity

USER ACTION

Convert an accepted match into an owned commercial opportunity.

PLATFORM RESPONSE

Tracks stage, owner, next action, due date and decision history.

Priyanka, Abhishek, Vishal / workflow: Adrika

8 Monitor and audit

USER ACTION

Review dashboard status, unresolved issues and the audit trail.

PLATFORM RESPONSE

Aggregates operational metrics and preserves traceability.

Vishal, Priyanka / governance: Aryan / QA: Harish

The platform assists an authorised user. It does not approve suppliers or commercial outcomes. Every material action remains traceable.

Touchpoint build requirements

Stages 1 to 4: access, supplier records, readiness and buyer demand

FOUNDATION AND WORKFLOW

STAGE	USER ACTIVITY	REQUIRED FUNCTIONALITY	PRIMARY BUILD OWNER	SUPPORT AND CONTROL	EXIT EVIDENCE
1	**Access workspace** Authorised user signs in and enters the permitted workspace.	Login, session handling, role-based access control, protected routes, access-denied state and user activity log.	**Abhishek** **Priyanka**	Ajendra reviews access risk. Harish tests approved and denied paths.	Approved roles can sign in. Denied actions fail safely and leave an audit record.
2	**Register supplier and product** User creates and maintains supplier and product records.	Supplier and product forms, field validation, create/read/update APIs, relational schema, evidence metadata, search and audit events.	**Priyanka** **Abhishek** **Vishal**	Adrika defines fields and workflow. Ajendra reviews data protection. Harish verifies CRUD and permissions.	Authorised user creates, retrieves, edits and searches a valid record.
3	**Assess China readiness** User completes the assessment and resolves missing information.	Configurable questionnaire, required-field logic, approved readiness rules, score or status, warnings and reviewer state.	**Adrika** **Priyanka** **Abhishek**	Vishal stores evidence. Alok supports rule design. Harish and Ajendra test quality and control cases.	Assessment produces a traceable status and blocks incomplete progression.
4	**Capture buyer requirement** User records demand, exclusions and commercial priorities.	Requirement form, eligibility criteria, priority weights, versioning, validation, save/retrieve and audit event.	**Adrika** **Priyanka** **Abhishek**	Vishal owns data contracts. Alok confirms match inputs. Harish validates workflow boundaries.	Approved requirement is complete, versioned and ready for match execution.

Touchpoint build requirements

Stages 5 to 8: matching, human decision, opportunity and audit review

MATCHING AND CONTROL

STAGE	USER ACTIVITY	REQUIRED FUNCTIONALITY	PRIMARY BUILD OWNER	SUPPORT AND CONTROL	EXIT EVIDENCE
5	**Generate match** User requests ranked candidates for an approved requirement.	Eligibility filter, approved weights, semantic comparison, ranked results, rule and model version, deterministic fallback and evaluation logging.	**Alok**	Vishal supplies retrieval and storage. Abhishek orchestrates services. Adrika, Ajendra and Harish review meaning, risk and quality.	Expected candidates rank correctly on test cases. Rules-only fallback remains available.
6	**Review and decide** User compares candidates and records a human disposition.	Candidate comparison, score breakdown, explanations, warnings, missing data, decision reason, accept/hold/reject and audit event.	**Adrika** **Priyanka** **Abhishek**	Alok owns explanations. Vishal records inputs and decisions. Harish and Ajendra test misuse and denied access.	User understands why candidates ranked and records a traceable decision.
7	**Manage opportunity** User converts an accepted match into an active opportunity.	Opportunity creation, pipeline stages, owner, next action, due date, notes and links to the supplier, product, requirement and match.	**Priyanka** **Abhishek** **Vishal**	Adrika defines states. Harish tests transitions. Aryan governs cross-workstream integration.	Accepted match becomes an opportunity and progresses through approved states.
8	**Monitor and audit** User reviews operational status and traceability.	Dashboard counts, status filters, readiness, match and pipeline views, unresolved-item list and role-aware audit history.	**Vishal** **Priyanka**	Abhishek secures queries. Harish reconciles results. Aryan owns governance. Ajendra reviews security evidence.	Dashboard agrees with source records. Audit history shows who changed what and when.
