Revised delivery ownership

Role change effective from the programme restart on 26 October 2026

ROLE SWAP CONFIRMED

Aryan now leads project coordination, product operations and integration governance. Ajendra now owns cybersecurity and DevSecOps.

INTERN	ASSIGNED ROLE	CORE OWNERSHIP	ROLE BOUNDARY OR CONTROL
Aryan Ghai	**Technical Project Coordinator, Product Operations and Integration Governance**	Sprint cadence, backlog, risks, dependencies, interface coordination, integration evidence and review packs.	Coordinates delivery. Does not approve product policy, architecture or release alone.
Ajendra Nath Tripathi	**Cybersecurity and DevSecOps Engineer**	Threat model, data classification, access-control review, secrets, dependency and configuration checks, negative tests and remediation tracking.	Validates security and escalates risk. Technical owners implement fixes.
Adrika T Kumar	Product UX and Commercial Workflow Analyst	User journeys, field dictionary, wireframes, user stories, acceptance criteria, usability and human-review requirements.	Defines workflow intent. BNCS retains material commercial and policy approval.
Priyanka Singh	Frontend Web and Client-Side Integration Engineer	Authenticated interface, components, forms, validation, journey screens, dashboards and client-side integration.	Owns frontend delivery and coordinates every service contract used by the interface.
Abhishek Kumar	Application Backend and Access-Control Engineer	Authentication, RBAC, application APIs, workflow states, request validation, structured errors and backend integration tests.	Owns application services. Security review remains with Ajendra.
Vishal Chauhan	Data and Platform Services Engineer	Schema, migrations, constraints, search, analytics queries, audit storage, data contracts and recovery evidence.	Owns platform data services. Does not define commercial meaning alone.
Alok Tiwari	AI Matching and Data Intelligence Engineer	Eligibility filters, scoring, semantic comparison, explanations, evaluation cases, fallback and model limitations.	AI recommends. Authorised users make all material decisions.
Harish Pal	QA and Test Automation Engineer	Test strategy, traceability, functional, integration and regression coverage, defect control and UAT recommendation.	Provides independent verification. BNCS accepts or rejects the pilot.
